eXtensible Catalog is open source, user-centered, next generation software for libraries. It comprises four software components that can be used independently to address a particular need or combined to provide an end-to-end discovery system to connect library users with resources.

XC Drupal Toolkit – Take Control of Your Library Website

Manage the content and functionality of your library's website in one easy package with Drupal. This toolkit integrates searchable library metadata, ILS circulation services and library website content into a feature-rich web user interface.

Features

- Provides a single user interface for searching across ILS, digital repository, and library web page content. Users can find everything from library hours to books and journals in one place.
- Implements innovative faceted browse features that make use of FRBRized data to help users find related works.
- Offers powerful tools to build web applications that tie into ILS content and functionality. Eliminates jumping through hoops to build a new library web service.
- Integrates fully with an existing ILS to display live circulation status and place requests in the circulation system.
- Works with existing authentication systems such as the ILS patron database and LDAP servers.
- Built on the powerful Drupal Content Management System, which offers an open source community with thousands of free add-ons and opportunities for collaboration with other libraries.
- Includes documentation and is easy to set up and customize.
- Allows libraries to easily add features from an extensive feature library.
