

XC Software Suite

- ✓ Implement next generation catalog interfaces on an extensible and adaptable architecture
- ✓ Offer innovative services to end users and grow the role of your library within the community it serves
- ✓ Migrate local customizations into future version upgrades
- ✓ Maximize cataloging investments and leverage existing staff in new ways

eXtensible Catalog is open source, user-centered, next generation software for libraries. It comprises four software components that can be used independently to address a particular need or combined to provide an end-to-end discovery system to connect library users with resources.

User Interface – Take Control of Your Library Website

The **XC Drupal Toolkit** integrates searchable library metadata, ILS circulation services, repository content and library website content into a feature-rich web user interface. The out-of-the-box search interface offers faceted browsing with customizable facets. A platform to build custom web applications that integrate with library metadata and ILS circulation services is also provided.

Coming Soon

Metadata Management – Take Control of Disparate Data

The **XC Metadata Services Toolkit** enables the XC user interface to present FRBRized, faceted navigation across a range of library resources. The toolkit aggregates metadata from various silos, normalizes (cleans-up) metadata of varying levels of quality, and transform MARC and DC metadata into a consistent format for use in the discovery layer. This toolkit presents an opportunity for libraries to apply their expertise with creating and managing metadata in a variety of web applications.

Connectivity – Take Control of the Integrated Library System

Connecting XC with the metadata repository and circulation services in an ILS requires the **XC OAI Toolkit** and the **XC NCIP Toolkit**. Each of these toolkits is designed to closely integrate with a range of Integrated Library Systems. The OAI Toolkit provides synchronization with MARC metadata that is managed by the ILS. The NCIP Toolkit provides live circulation status display, circulation forms submission, and ILS authentication for applications that work alongside your ILS.
